GO Slim (Biological Process) enrichment across three environmental stresses
(* = FDR < 0.05)
Upregulated DEGs
carbohydrate metabolic process
generation of precursor metabolites and energy
catabolic process
anatomical structure formation involved in morphogenesis
small molecule metabolic process
monocarboxylic acid metabolic process
oligosaccharide metabolic process
response to oxidative stress
protein folding
response to chemical
cell wall organization or biogenesis
response to osmotic stress
Heat Shock
Hypoxia
Osmotic Stress

Downregulated DEGs
rRNA processing
cytoplasmic translation
translation
biosynthetic process
ribosomal large subunit biogenesis
ribosomal subunit export from nucleus
tRNA metabolic process
RNA modification
protein-RNA complex assembly
ribosomal small subunit biogenesis
tRNA processing
nuclear transport
translational elongation
Heat Shock
Hypoxia
